

Daniel G. Amen, M.D.

Change Your Brain, Change Your Life™

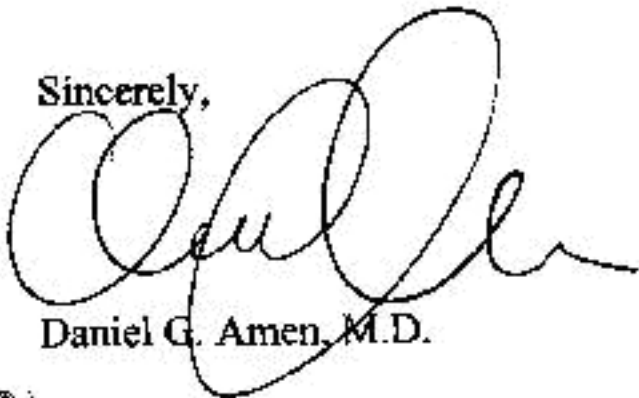

2/23/06

To Whom It May Concern:

I am a board certified child, adolescent, and adult psychiatrist, medical director of Amen Clinics, Inc. (four psychiatric/brain imaging clinics), and Assistant Clinical Professor of Psychiatry and Human Behavior at the University of California, Irvine School of Medicine. For the past 10 years my clinics have screened all of our patients for the Irlen Syndrome. When appropriate, we have made many referrals to Irlen Clinics and our patients have successfully used the Irlen Filters to alleviate many symptoms, including headaches, learning and reading problems, light sensitivity, and depth perception issues.

In performing before and after scans with the Irlen filters as the only intervention we have seen the brain become significantly more balanced. I have often been amazed at the improvements our patients have experienced. My sense is that the lenses help to filter out certain colors of the light spectrum that are irritating to brain circuits.

Sincerely,

Daniel G. Amen, M.D.
